

ROYAL MELBOURNE HOSPITAL

An extensive programme of civil engineering works has been carried out at the Royal Melbourne Hospital, including:

- an audit of existing stormwater systems, analysis of the existing system capacity and preparation of a stormwater management plan
- provision of new underground stormwater and sub-soil drainage to serve new buildings
- design of new pavements and alterations to existing pavements
- surface grading of exterior pavements and landscaping to direct stormwater to the underground system

Location:
Parkville, Victoria

Client:
Dept of Human Services

Architect:
Daryl Jackson
