

**KINGSTON HIGH SCHOOL**  
**Hobart, Tasmania**

A new school built for a population of 750 students it is based around the new teaching paradigm involving discrete but inter-related learning pods. The project is built on a steeply sloping site of 8,600 square metres and has required clear lateral thinking in order to address all the architectural as well as site constraints. The project relies on steel super-structures and concrete foundations.

The project budget was originally set at \$23 million and the design team have delivered a project that complies with the brief in all respects.
